

Worksheet 4.4 Content

See Module 4: *How Do You Design a Curriculum? Part 4: Content*

For each unit in your curriculum, list the specific knowledge and skills your learners will need to know to meet the objective and perform well on the test. Remember to take the audience into account when deciding on the level of detail needed.

1. Select a unit to work on from your curriculum outline.
2. Referring to the unit goal, outline and objectives (worksheets 4.1-4.3), describe the required knowledge and skills in detail for each topic and subtopic in the unit outline.
3. Now label each item as knowledge or skill. This will be useful when you are deciding how to test.
